

WHAT IS CLAIMED IS:

1 1. An apparatus for waterproofing a terminal connecting portion of a  
2 sheathed wire, in which a terminal fitting and a bared conductor of the  
3 sheathed wire are connected with each other, by molding with resin, the  
4 apparatus comprising:

5 an upper mold having an inner space provided with a dome-like  
6 ceiling face, which defines an upper part of a molding cavity in which the  
7 terminal connecting portion of the sheathed wire is accommodated and molten  
8 resin is injected therein; and

9 a lower mold having an inner space provided with vertical side faces  
10 and a bottom face, which defines a lower part of the molding cavity.

1 2. The waterproofing apparatus as set forth in claim 1, wherein the  
2 dome-like ceiling face of the upper mold has a curvature so selected as to be  
3 coincident with a curvature of an outer face of the terminal fitting.
